Commercial interiors are elevated to new levels of comfort, class and sophistication with Column and Curtain — 2.8m high, floor-to-ceiling 3D-formed acoustic panels containing over 50% post-consumer recycled PET. Designed for seamless installation without a floor-to-ceiling join, panel joins and edge trims are also available to suit individual project requirements.

Column draws inspiration from classical architecture, with its undulating, symmetrical rhythm and a depth of approximately 70mm. The wave-like peaks and troughs, combined with non-woven raw materials, capture airgaps in a direct-fix wall application to create a distinct sound absorption zone. Curtain, its asymmetrical counterpart, takes on a more fluid, free-form appearance — a contemporary acoustic “curtain effect” where the non-woven materials appear to ebb and flow across a three-dimensional form, also designed with an airgap for enhanced acoustic performance.

Together, Column and Curtain deliver a unique visual and tactile experience, balancing aesthetic appeal, acoustic efficiency and sustainability — a combination that earned them the SBID International Design Award for Surfaces & Finishes.
